Who Should Use This Document

This User Guide is intended for use by any person who needs to operate or to troubleshoot problems with the printer.

The guide is complete for the successful operation of the BBP81 Thermal Transfer 300 dpi, 4-inch wide printer. However, it also lists specifics for the BBP81 Thermal Transfer 300 dpi, 6-inch wide printer, as well as the 203 and 600 dpi printers. These other printers may not be available in your area at this time. Please check with your local Brady representative for more information .

How This Document Is Organized

The User Guide is set up as follows:

Section	Description
<i>Introduction on page 7</i>	This section shows the operational controls and location of major components used when loading media.
<i>Printer Setup on page 15</i>	This section provides the tasks that you must complete and the issues that you must consider before you load and configure your printer.
<i>Operations on page 31</i>	This section provides the procedures for loading and calibrating the printer.
<i>Configuration on page 47</i>	This section describes the control panel parameters that are used to configure the printer for operation.
<i>Routine Maintenance on page 77</i>	This section provides routine cleaning and maintenance procedures.
<i>Troubleshooting on page 85</i>	This section provides information about errors that you might need to troubleshoot. Assorted diagnostic tests are included.
<i>Specifications on page 109</i>	This section provides the features of and specifications for the printer.

Contacts

You can contact Brady Worldwide Inc. at the following:

Corporate Headquarters

Brady Worldwide, Inc.
6555 West Good Hope Road
Milwaukee, WI 53223 U.S.A.
T: 414-358-6600 USA Domestic
F: 414-438-6958

Technical Service

Brady Technical Service and the Brady Knowledge Center may be contacted at www.bradyid.com.

Document Conventions

The following conventions are used throughout this document to convey certain information.

Alternate Color (online only) Cross-references contain hot links to other sections in this guide. If you are viewing this guide online in .pdf format, you can click the cross-reference ([blue text](#)) to jump directly to its location.

LCD Display Examples Text from a printer's Liquid Crystal Display (LCD) appears in Letter Gothic Std font.

Command Line Examples Command line examples appear in Courier New font. For example, type `Tools` to get to the Post-Install scripts in the `bin` directory.

Files and Directories File names and directories appear in Courier New font. For example, the `Brady<version number>.tar` file and the `/root` directory.

Icons Used

Caution • Warns you of the potential for electrostatic discharge.

Caution • Warns you of a potential electric shock situation.

Caution • Warns you of a situation where excessive heat could cause a burn.

Caution • Advises you that failure to take or avoid a specific action could result in physical harm to you.

Caution • (No icon) Advises you that failure to take or avoid a specific action could result in physical harm to the hardware.

Important • Advises you of information that is essential to complete a task.

Note • Indicates neutral or positive information that emphasizes or supplements important points of the main text.

Example • Provides an example, often a scenario, to better clarify a section of text.

Illustration Callouts Callouts are used when an illustration contains information that needs to be labeled and described. A table that contains the labels and descriptions follows the graphic. [Figure 1](#) provides an example.

Figure 1 • Sample Figure with Callouts

8	Parallel port

Printer Media Compartment

Figure 4 shows the components inside the media compartment of your printer. Depending on installed options, your printer may look slightly different.

Note • For optimal printing quality and proper printer performance across our product line, Brady strongly recommends the use of genuine Brady supplies as part of the total solution. Specifically, the BBP81 is designed to work only with genuine Brady printheads, thus maximizing safety and print quality.

8	SETUP/EXIT button
9	MINUS (-) button
10	SELECT button
11	FEED button
12	PAUSE button

Control Panel Buttons

Table 1 • Control Panel Buttons

Button	Function
FEED	Forces the printer to feed one blank label each time the button is pressed. <ul style="list-style-type: none"> • Printer not printing: one blank label immediately feeds. • Printing: one blank label feeds after the current batch of labels is complete.
PAUSE	Starts and stops the printing process. <ul style="list-style-type: none"> • Printer not printing: no printing occurs. (Press PAUSE again to resume printing.) • Printing: printing stops after the current label is complete.
CANCEL	Cancels print jobs when the printer is paused. <ul style="list-style-type: none"> • Printer not printing: the next stored label format does not print. • Printing: current label completes printing, and the next label format is cancelled. Press and hold for several seconds to cancel all print jobs in memory.
SETUP/EXIT	Enters and exits the configuration mode.
SELECT	Toggles the function of PLUS (+) and MINUS (–) between the Scroll and Change Modes. <ul style="list-style-type: none"> • Press once to use PLUS (+) and MINUS (–) to change the values of the selection. • Press again to use PLUS (+) and MINUS (–) to scroll through the menu items.
PLUS (+) (scroll mode)	Scrolls to the next selection.
PLUS (+) (change mode)	<ul style="list-style-type: none"> • Increases the value. • Performs the action on the bottom right of the LCD.
MINUS (–) (scroll mode)	Scrolls to the previous selection.
MINUS (–) (change mode)	<ul style="list-style-type: none"> • Decreases the value. • Moves to the next available digit in a number. • Performs the action on the bottom left of the LCD.

Control Panel Lights

Table 2 • Control Panel Lights

Light	Status	Indication
POWER	Off	The printer is off, or no power is applied.
	On	The printer is on.
PAUSE	Off	Normal printer operation.
	On	The printer has stopped all printing operations.
	Flashing	The Pause light flashes when initializing FLASH memory and in Peel-Off Mode when the label is available.
ERROR	Off	Normal printer operation (no errors).
	On	An error condition is preventing printing. This includes MEDIA OUT and RIBBON OUT errors.
	Flashing	An error condition exists, but printing is allowed to continue. This includes RIBBON IN warning, HEAD UNDER TEMP warning, and HEAD OVER TEMP error.
DATA	Off	Normal printer operation (no data being received or processed).
	One flash	CANCEL was pressed and a format is successfully cancelled.
	Slow flashing	The printer cannot accept more data from the host.
	Fast flashing	The printer is receiving data.
	On	A partial format has been received and no subsequent data activity.

Printer Language Modes

The BBP81 came from the factory with firmware that operates in, or allows you to use, certain commands for the ZPL printer programming language.

Firmware Downloads

You may download the latest firmware version at www.bradyid.com.

Note • When the printer changes from one printer language to another, error messages may appear on the LCD, and some control panel lights may activate in error mode. You may ignore these error messages and lights. When the firmware download is complete, reboot the printer and then load printer defaults to return the printer to Operating mode.

Additional Printer Language Information

The ZPL II[®] Programming Guide contains specific information about the different printer language modes. A copy of this is available at www.bradyid.com.

Notes • _____

Before You Begin

Review this checklist, and resolve any issues before you set up or use your printer.

- Stress Free Setup Service** To schedule a free phone setup assistance appointment, call 1-800-643-8766 and select menu option 4.
- Unpack and Inspect the Printer** Have you unpacked the printer and inspected it for damage? If you have not, see [Unpack and Inspect the Printer on page 17](#).
- Register Your Printer.** Go to www.bradyid.com to register your BBP81.
- Select a Site** Have you selected an appropriate location for the printer? If you have not, see [Select a Site for the Printer on page 19](#).
- Connect to a Data Source** Have you determined how the printer will connect to a data source (usually a computer)? For more information, see [Select a Data Communication Interface on page 20](#).
- Attach a Power Cord** Do you have the correct power cord for your printer? If you are unsure, see [Power Cord Specifications on page 25](#). To attach the power cord and connect the printer to a power source, see [Connect the Printer to a Power Source on page 24](#).
- Select Media** Do you have the correct media for your application? If you are unsure, see [Types of Media on page 26](#).
- Select Ribbon** Do you need to use ribbon, and is the appropriate ribbon available, if needed? If you are unsure, see [Ribbon Overview on page 28](#).

Handling the Printer

This section describes how to handle your printer.

Stress Free Setup Service

Brady's Stress Free Service helps you set up your new printer and software. To schedule a free phone setup assistance appointment, call 1-800-643-8766 and select menu option 4.

Unpack and Inspect the Printer

When you receive the printer, immediately unpack it and inspect for shipping damage.

- Save all packing materials.
- Check all exterior surfaces for damage.
- Raise the media door, and inspect the media compartment for damage to components.

If you discover shipping damage upon inspection:

- Immediately notify the shipping company and file a damage report.
- Keep all packaging material for shipping company inspection.
- Notify your authorized Brady reseller

Important • Brady Worldwide Inc. is not responsible for any damage incurred during the shipment of the equipment and will not repair this damage under warranty.

Register Your Printer

Go to www.bradyid.com to register your BBP81. As a registered user, you will receive notification of upgrades, special offers, and new product announcements.

Store the Printer

If you are not placing the printer into immediate operation, repackage it using the original packing materials. You may store the printer under the conditions shown in [Table 3](#).

Table 3 • Storage Temperature and Humidity

Temperature	Relative Humidity
-40°F to 140°F (-40° to 60°C)	5% to 85% non-condensing

Ship the Printer

If you must ship the printer:

- Turn off (●) the printer, and disconnect all cables.
- Remove any media, ribbon, or loose objects from the printer interior.
- Close the printhead.
- Carefully pack the printer into the original container or a suitable alternate container to avoid damage during transit. A shipping container can be purchased from Brady if the original packaging has been lost or destroyed.

Select a Site for the Printer

Consider the following when selecting an appropriate location for your printer.

Select a Surface

Select a solid, level surface of sufficient size and strength to accommodate the printer and other equipment (such as a computer), if necessary. The choices include a table, countertop, desk, or cart. For the printer's weight and dimensions, see [General Specifications on page 110](#).

Provide Proper Operating Conditions

This printer is designed to function in a wide range of environmental and electrical conditions, including a warehouse or factory floor. For more information on the required conditions, see [General Specifications on page 110](#).

[Table 4](#) shows the temperature and relative humidity requirements for the printer when it is operating.

Table 4 • Operating Temperature and Humidity

Mode	Temperature	Relative Humidity
Thermal Transfer	40° to 104°F (5° to 40°C)	20 to 85% non-condensing.
Direct Thermal	32° to 104°F (0° to 40°C)	20 to 85% non-condensing

Allow Proper Space

The printer should have enough space around it for you to be able to open the media door. To allow for proper ventilation and cooling, leave open space on all sides of the printer.

Caution • Do not place any padding or cushioning material behind or under the printer because this restricts air flow and could cause the printer to overheat.

Provide a Data Source

If the printer will be located away from the data source (such as a computer), the selected site must provide the appropriate connections to that data source. For more information on the types of communication interfaces and their limitations, see [Select a Data Communication Interface on page 20](#).

Provide a Power Source

Place the printer within a short distance of a power outlet that is easily accessible.

Select a Data Communication Interface

Table 5 provides basic information about data communication interfaces that you can use to connect your printer to a computer. You may send label formats to the printer through any data communication interface that is available. Select an interface that is supported by both your printer and your computer or your Local Area Network (LAN).

Table 5 • Characteristics of the Data Communication Interfaces

Interface	Standard or Optional on Printer	Characteristics
RS-232 Serial	Standard	<ul style="list-style-type: none"> • Maximum cable length of 50 ft (15.24 m). • You may need to change printer parameters to match the host computer. • You need to use a null-modem adaptor to connect to the printer if using a standard modem cable.
IEEE 1284 Bidirectional Parallel	Standard	<ul style="list-style-type: none"> • Maximum cable length of 10 ft (3 m). • Recommended cable length of 6 ft (1.83 m). • No printer parameter changes required to match the host computer.
USB	Standard	<ul style="list-style-type: none"> • Maximum cable length of 16.4 ft (5 m). • No printer parameter changes required to match the host computer.
Internal wired Ethernet print server	Optional	<ul style="list-style-type: none"> • Can print to the printer from any computer on your LAN. • Can communicate with the printer through the printer's web pages. • Computer must be equipped with an Ethernet board. • The printer must be configured to use your LAN.
Wireless Ethernet print server	Optional	<ul style="list-style-type: none"> • Can print to the printer from any computer on your Wireless Local Area Network (WLAN). • Computer must be equipped with an Ethernet board. • The printer must be configured to use your WLAN.

Data Cables

You must supply all data cables or wireless cards for your application.

Data Cables Ethernet cables do not require shielding, but all other data cables must be fully shielded and fitted with metal or metallized connector shells. Unshielded data cables may increase radiated emissions above the regulated limits.

To minimize electrical noise pickup in the cable:

- Keep data cables as short as possible.
- Do not bundle the data cables tightly with the power cords.
- Do not tie the data cables to power wire conduits.

Connect the Printer to the Computer or Network

Table 6 shows how to connect the different types of data cables to your printer and computer. The connectors on the back of your computer may be in different locations than on the sample computer shown in this section. For another view of the connectors on the printer, see Figure 3 on page 8.

Caution • Ensure that the printer power is off (O) before connecting data communications cables. Connecting a data communications cable while the power is on (I) may damage the printer.

Table 6 • Connecting the Printer to a Computer or Network

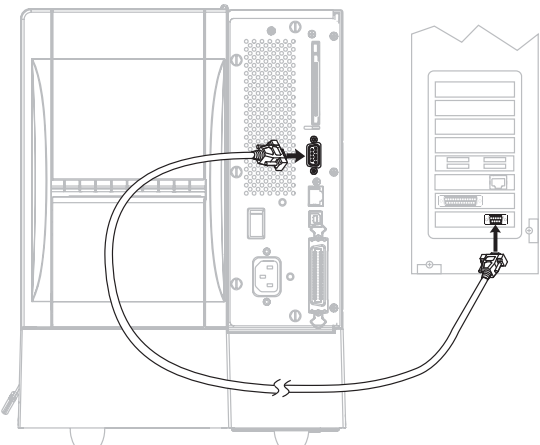

Interface	Connection and Configuration
RS-232 Serial	<p>The baud rate, number of data and stop bits, the parity, and the XON/XOFF or DTR control must match those of the host computer. See Control Panel Parameters on page 53 to view or change these parameters.</p> 

Table 6 • Connecting the Printer to a Computer or Network (Continued)

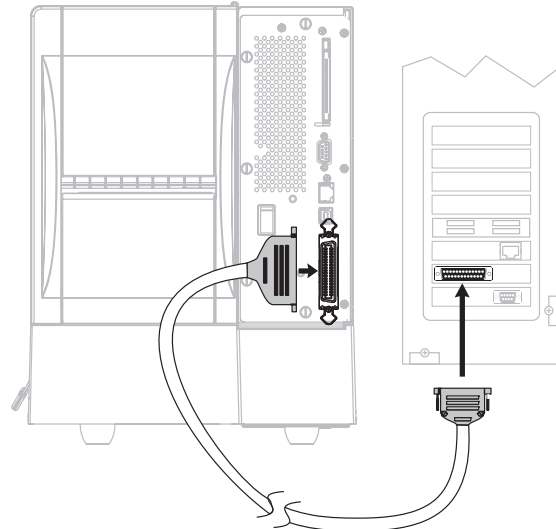

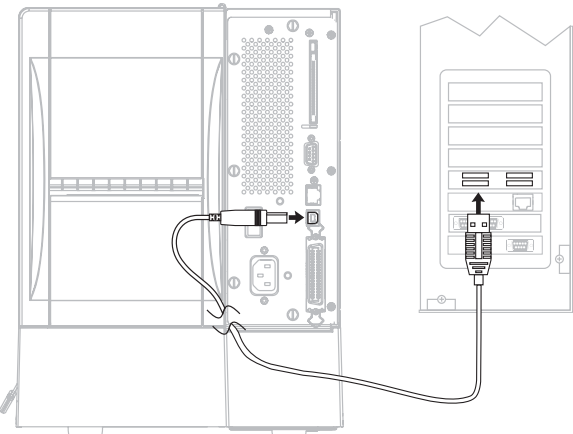

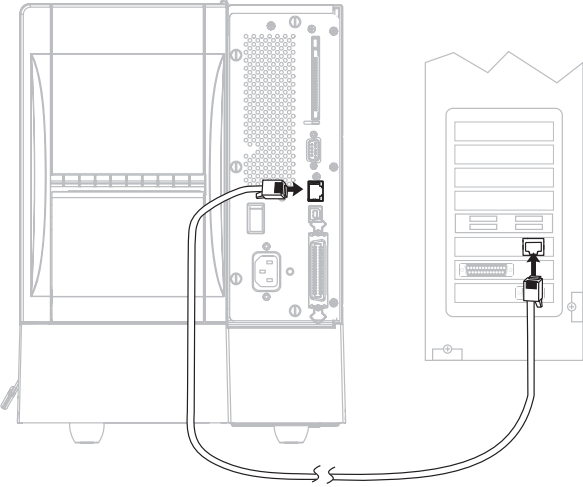

Interface	Connection and Configuration
IEEE 1284 Bidirectional Parallel	<p data-bbox="584 315 1047 346">No additional configuration is necessary.</p> 
USB	<p data-bbox="584 924 1047 955">No additional configuration is necessary.</p> <p data-bbox="584 961 1396 1050">Caution • Be careful not to plug the USB cable into the wired Ethernet print server connector on the printer because doing so will damage the connector.</p> 

Table 6 • Connecting the Printer to a Computer or Network (Continued)

Interface	Connection and Configuration
Internal wired Ethernet print server	<p data-bbox="586 317 1414 411">Refer to the <i>BradyConnect 10/100 Print Server User and Reference Guide</i> for configuration instructions. A copy of this manual is available at www.bradyid.com/bbp81.</p>  <p>The diagram illustrates the connection of an Ethernet print server. On the left, the back panel of a printer is shown with various ports. An Ethernet cable is plugged into the network port. On the right, a network switch or patch panel is shown with another Ethernet cable plugged into its port. A double-headed arrow at the bottom indicates the connection between the two devices.</p>

Connect the Printer to a Power Source

The AC power cord must have a three-prong female connector on one end that plugs into the mating AC power connector at the rear of the printer. If a power cable was not included with your printer, refer to *Power Cord Specifications* on page 25.

Caution • For personnel and equipment safety, always use an approved three-conductor power cord specific to the region or country intended for installation. This cord must use an IEC 320 female connector and the appropriate region-specific three-conductor grounded plug configuration.

To connect the printer to a power source, complete these steps:

1. Toggle the printer power switch to the off (O) position.
2. Plug the power cord into the AC power connector (1) on the rear of the printer.

3. Plug the other end of the power cord into a power outlet near the printer.
4. Turn on (I) the printer.

The control panel LCD and lights activate, indicating that the printer is booting up.

Power Cord Specifications

Caution • For personnel and equipment safety, always use an approved three-conductor power cord specific to the region or country intended for installation. This cord must use an IEC 320 female connector and the appropriate region-specific, three-conductor grounded plug configuration.

Depending on how your printer was ordered, a power cord may or may not be included. If one is not included or if the one included is not suitable for your requirements, see [Figure 6](#) and refer to the following guidelines:

- The overall cord length must be less than 9.8 ft. (3 m).
- The cord must be rated for at least 10 A, 250 V.
- The chassis ground (earth) **must** be connected to ensure safety and reduce electromagnetic interference.

Figure 6 • Power Cord Specifications

1	AC power plug for your country—This should bear the certification mark of at least one of the known international safety organizations (Figure 7).
2	3-conductor HAR cable or other cable approved for your country.
3	IEC 320 connector—This should bear the certification mark of at least one of the known international safety organizations (Figure 7).
4	Length ≤ 9.8 ft. (3 m). Rating 10 Amp, 250 VAC.

Figure 7 • International Safety Organization Certifications

Types of Media

Brady strongly recommends the use of Brady-brand supplies for continuous high-quality printing. A wide range of paper, polypropylene, polyester, and vinyl stock has been specifically engineered to enhance the printing capabilities of the printer and to prevent premature printhead wear. To view supplies, go to www.bradyid.com/bbp81.

Your printer can use various types of media:

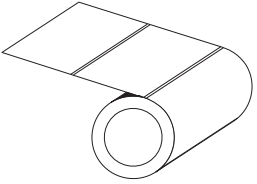

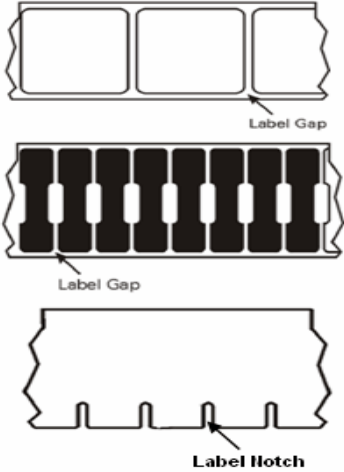

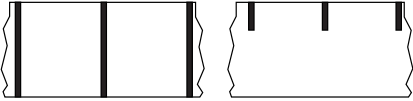

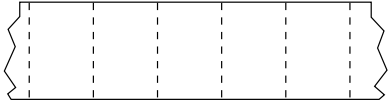

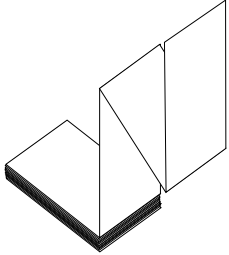

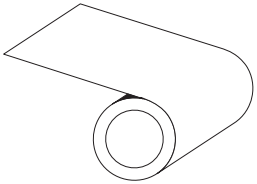

- *Standard media*—Most standard media uses an adhesive backing that sticks individual labels or a continuous length of labels to a liner.
- *Tag stock*—Tags are usually made from a heavy paper. Tag stock does not have adhesive or a liner, and it is typically perforated between tags.
- *Permasleeve*—Heat shrinkable tubing with permanent, legible identification options for wires and cables.

Important • Transponder placement within a label depends on the transponder type and the printer model. Make sure that you are using the correct “smart” media for your printer.

[Table 7 on page 27](#) describes roll and fanfold media. Roll media is loaded into the printer while fanfold media may be located outside of the printer.

Table 7 • Roll and Fanfold Media

Media Type	How It Looks	Description
<p>Non-Continuous Roll Media</p>		<p>Roll media is wound on a 3-in. (76-mm) core. Individual labels are separated by one or more of the following methods:</p> <ul style="list-style-type: none"> <p><i>Web media</i> separates labels by gaps or notches.</p>  <p><i>Black mark media</i> uses pre-printed black marks on the back side of the media to indicate label separations.</p>  <p><i>Perforated media</i> has perforations that allow the labels or tags to be separated from each other easily. The media may also have black marks or other separations between labels or tags.</p> 
<p>Non-Continuous Fanfold Media</p>		<p>Fanfold media is folded in a zigzag pattern. Fanfold media can have the same label separations as non-continuous roll media. The separations would fall on or near the folds.</p>
<p>Continuous Roll Media</p>		<p>Roll media is wound on a 3-in. (76-mm) core. Continuous roll media does not have gaps, holes, notches, or black marks to indicate label separations. This allows the image to be printed anywhere on the label. Sometimes a cutter is used to cut apart individual labels.</p>

Ribbon Overview

Ribbon is a thin film that is coated on one side with wax, resin, or wax resin, which is transferred to the media during the thermal transfer process. The media determines whether you need to use ribbon and how wide the ribbon must be.

When ribbon is used, it must be as wide as or wider than the media being used. If the ribbon is narrower than the media, areas of the printhead are unprotected and subject to premature wear.

When to Use Ribbon

Thermal transfer media requires ribbon for printing while direct thermal media does not. To determine if ribbon must be used with a particular media, perform a media scratch test.

To perform a media scratch test, complete these steps:

1. Scratch the print surface of the media rapidly with your fingernail.
2. Did a black mark appear on the media?

If a black mark...	Then the media is...
Does not appear on the media	Thermal transfer. A ribbon is required.
Appears on the media	Direct thermal. No ribbon is required.

Coated Side of Ribbon

Ribbon is wound with the coated side on the outside. The ribbon used must match the Thermal Transfer option installed. The standard Thermal Transfer option (black ribbon spindle) uses ribbon coated on the outside. If you are unsure which side of a particular roll of ribbon is coated, perform an adhesive test or a ribbon scratch test to determine which side is coated.

Adhesive Test

If you have labels available, perform the adhesive test to determine which side of a ribbon is coated. This method works well for ribbon that is already installed.

To perform an adhesive test, complete these steps:

1. Peel a label from its liner.
2. Press a corner of the sticky side of the label to the outer surface of the roll of ribbon.
3. Peel the label off of the ribbon.

4. Observe the results. Did flakes or particles of ink from the ribbon adhere to the label?

If ink from the ribbon...	Then...
Adhered to the label	The ribbon is coated on the outside and can be used with the standard Thermal Transfer option (black ribbon spindle). In the ribbon loading procedure, instructions are marked with this symbol. 

Ribbon Scratch Test

Perform the ribbon scratch test when labels are unavailable.

To perform a ribbon scratch test, complete these steps:

1. Unroll a short length of ribbon.
2. Place the unrolled section of ribbon on a piece of paper with the outer surface of the ribbon in contact with the paper.
3. Scratch the inner surface of the unrolled ribbon with your fingernail.
4. Lift the ribbon from the paper.
5. Observe the results. Did the ribbon leave a mark on the paper?

If the ribbon...	Then...
Left a mark on the paper	The ribbon is coated on the outside and can be used with the standard Thermal Transfer option (black ribbon spindle). In the ribbon loading procedure, instructions are marked with this symbol. 

Operations

This section provides the procedures for loading and calibrating the printer.

Note • Complete the tasks and resolve the issues in [Printer Setup on page 15](#) before operating the printer.

Contents

Print Modes	32

Print Modes

The printer can use different print modes and options for label removal (Table 8). Use a print mode that matches the media being used. For more information on the types of media, see *Types of Media* on page 26. To select a print mode, see *Select Print Mode* on page 61.

Print Mode Descriptions and Printer Requirements

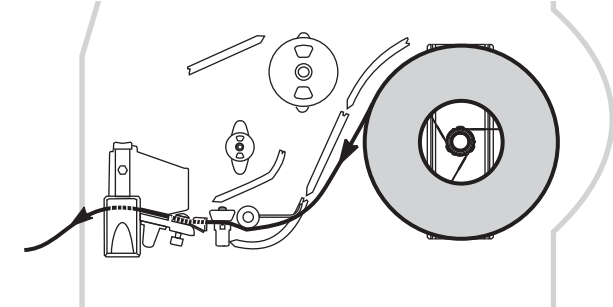

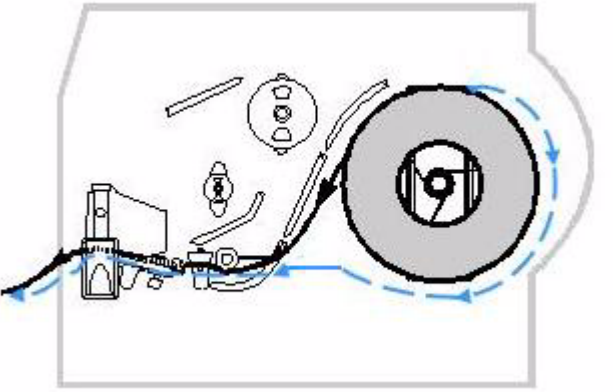

Table 8 • Print Modes

Print Mode	When to Use/Printer Options Required	Printer Actions
Tear-Off (default setting)	Use for most applications. This mode can be used with any printer options and most media types.	The printer prints label formats as it receives them. The printer operator can tear off the printed labels any time after they print.
Peel-Off	Use only if the printer has the Peel-Off, Liner Take-Up, or Rewind option.	The printer peels the label from the liner during printing and then pauses until the label is removed. In Peel-Off mode, the liner exits the front of the printer. In Peel-Off mode with Liner Take-Up, the liner winds onto the liner take-up spindle or the rewind spindle.
Cutter	Use if the printer has a cutter option when you want the labels to be cut apart.	The printer prints a label and then cuts it free.
Delayed Cut	Use if the printer has a cutter option when you want the printer to cut the labels apart at a signal.	The printer prints a label, pauses, and cuts the label when it receives the ~JK (delayed cut) ZPL command.
Rewind	Use if the printer has the Rewind option and you want the labels to rewind on a core.	The printer prints without pausing between labels. The media or liner is wound onto a core after printing.
Linerless Peel	Reserved for future options.	Reserved for future options.
Linerless Rewind	Reserved for future options.	Reserved for future options.

Media Paths

Table 9 shows the media paths for print mode and printer option combinations using roll media. Fanfold media uses the same print modes and printer options as roll media.

Table 9 • Media Paths for Print Modes with Various Printer Options

Print Mode	Printer Option	Media Path
Tear-Off	Printers with any printer options can use Tear-Off mode	
Permasleeve		

Load Media

The beginning steps for loading media are shown below. For more information about print modes and printer options, see [Print Modes on page 32](#).

Caution • While performing any tasks near an open printhead, remove all rings, watches, hanging necklaces, identification badges, or other metallic objects that could touch the printhead. You are not required to turn off the printer power when working near an open printhead, but Brady recommends it as a precaution. If you turn off the power, you will lose all temporary settings, such as label formats, and you must reload them before you resume printing.

Beginning Steps for all Print Modes

To begin loading media for all print modes, complete these steps:

1. Press the printhead release latch to open the printhead assembly. Lift the printhead until it latches open.

2. Slide out the media guide.

3. Insert media into the printer. Follow the instructions for roll or fanfold media, as appropriate.

Roll Media

- a. Remove and discard any tags or labels that are dirty or that are held by adhesives or tape.

Fanfold Media

- a. Feed the media through the rear or bottom access slot.

Rear Feed

Bottom Feed

Roll Media (Continued)

- b. Place the roll of media on the media supply spindle. Push the roll as far back as it will go.

OR

PermaSleeve Material Only

Fanfold Media (Continued)

- b. Drape the media over the media supply spindle.

- 4. Feed the media under the dancer assembly (1), the upper media sensor (2), the ribbon sensor (3), and the adjustable sensor (4). (See Step 5 for sensor location of media type.) Slide the media back until it touches the inside back wall of the upper media sensor.

5. Adjust sensor to proper location, depending on media type.

6. Slide in the media guide until it touches the outer edge of the media.

7. Set the printer to Tear-Off mode. See [Select Print Mode on page 61](#) for instructions.

8. Close the printhead assembly.

9. If the printer is paused (the Pause light is on), press PAUSE to enable printing.

Load Ribbon

Always use ribbon that is wider than the media to protect the printhead from wear. For direct thermal printing, do not load ribbon in the printer.

The standard Thermal Transfer option (black ribbon spindle) uses ribbon coated on the outside. To avoid damaging your printer, follow the directions for the Thermal Transfer option installed in your printer.

Figure 8 shows the ribbon paths for ribbon coated on the outside. The coated surfaces of the ribbon are shown in gray when they are visible. To determine which side of a ribbon is printed, see [Coated Side of Ribbon](#) on page 28.

Figure 8 • Ribbon Path

1	Tension blade
2	Ribbon take-up spindle
3	Ribbon supply spindle
4	Printhead assembly
5	Printhead release latch

Caution • While performing any tasks near an open printhead, remove all rings, watches, hanging necklaces, identification badges, or other metallic objects that could touch the printhead. You are not required to turn off the printer power when working near an open printhead, but Brady recommends it as a precaution. If you turn off the power, you will lose all temporary settings, such as label formats, and you must reload them before you resume printing.

To load ribbon, complete these steps:

1. Set the ribbon supply spindle for normal or low tension.
 - To place the ribbon supply spindle in the **normal position**, firmly pull out the spindle end cap until it extends and clicks in place, as shown in [Figure 9](#). Use this setting for most applications.
 - To place the ribbon supply spindle in the **low-tension position**, firmly push in the end cap until it retracts and clicks in place, as shown in [Figure 9](#). Use this setting when using a 2-inch ribbon or if normal tension hampers ribbon movement.

Figure 9 • Ribbon Spindle—Normal and Low Tension

1	Normal Position (Spindle End Cap Extended)
2	Low-Tension Position (Spindle End Cap Retracted)

2. Press the printhead release latch to open the printhead assembly. Lift the printhead until it latches open.

3. Insert the ribbon into the printer. Follow these instructions for the Thermal Transfer option installed in your printer.

**Ribbon Coated Outside
(black ribbon spindle)**

- a. Hold the ribbon with the loose end unrolling clockwise.

- b. Place the roll of ribbon on the ribbon supply spindle (1) and push it all the way back.

- c. Pull the end of the ribbon under the printhead assembly (1) and out the front of the printer. Extend the ribbon approximately 24 in. (610 mm) out of the printer.

4. Close the printhead assembly.

5. Wind the ribbon clockwise onto the ribbon take-up spindle (1).

**Ribbon Coated Outside
(black ribbon spindle)**

Remove Used Ribbon

To remove used ribbon, complete these steps:

1. **Caution** • Do not cut the ribbon directly on the ribbon take-up spindle. Doing so may damage the spindle.

If the ribbon has not run out, cut or break it before the ribbon take-up spindle (1).

2. To loosen the ribbon, squeeze it against the ribbon take-up spindle tension blades (1). At the same time, turn the ribbon take-up spindle release knob counterclockwise (2). The tension blades collapse into the ribbon take-up spindle, loosening the ribbon.

3. Slide the used ribbon off of the ribbon take-up spindle and discard.

Calibrate the Printer

Auto Calibration

By default, the printer automatically calibrates on power up, when the printhead is closed. During auto calibration, the printer determines the label length and sensor settings.

The results of the auto calibration are stored in the printer's memory and are retained even if printer power is removed. These parameters remain in effect until the next calibration is performed.

Note • If the control panel settings for **MEDIA POWER UP** are set to LENGTH, NO MOTION, or FEED, the printer starts printing without auto calibrating. See [Select Media Power-Up Option](#) on page 56.

Adjust Printhead Pressure

You may need to adjust printhead pressure if printing is too light on one side, if you use thick media, or if the media drifts from side to side during printing.

See [Figure 10](#). The BBP81 (4") pressure adjustment dials have four possible settings designated by blocks of increasing size embossed on the print mechanism. The smallest block (fully counterclockwise) is considered position 1, and the largest block (fully clockwise) is considered position 4. The BBP81 (6") dials have seven settings instead of four.

Figure 10 • Printhead Pressure Adjustment Dials

1	Outside dial
2	Inside dial

To set printhead pressure, complete these steps:

1. Use [Table 10](#) or [Table 11](#) to select the initial dial settings for your media, depending on which printer you have.

Table 10 • BBP81 (4") Printhead Pressure

Media Width	Inside Dial	Outside Dial
1 in. (25.4 mm)	3	1
2 in. (51 mm)	4	1
3 in. (76 mm)	3	2
3.5 in. and up (89 mm and up)	3	3

Table 11 • BBP81 (6”) Printhead Pressure

Media Width	Inside Dial	Outside Dial
2 in. (50 mm)	6	1
3 in. (75 mm)	6	2
4 in. (100 mm)	7	3
5 in. (125 mm)	7	4
5.5 in. and up (140 mm and up)	6	6

2. If necessary, adjust the pressure adjustment dials as follows:

If the media...	Then...
Requires higher pressure to print well	Increase both dials one position.
Shifts left while printing	Increase the outside dial setting one position, or decrease the inside dial setting one position.
Shifts right while printing	Increase the inside dial setting one position, or decrease the outside dial setting one position.
Prints too lightly on the left side of the label.	Increase the inside dial setting one position.
Prints too lightly on the right side of the label.	Increase the outside dial setting one position.

Notes • _____

Configuration

This section describes the control panel parameters that are used to configure the printer for operation.

Contents

Setup Mode	48

Exit Setup Mode.	48
Change Password-Protected Parameters	50
Default Password Value	50
Disable the Password Protection Feature	50
Print a Configuration Label.	51
Print a Network Configuration Label	52
Control Panel Parameters	53
How to View or Modify Parameters	53
Additional Parameters	53
Standard Printer Parameters	54

Setup Mode

After you have installed the media and ribbon and the Power-On Self Test (POST) is complete, the control panel displays **BBP81 READY**. You may now set printer parameters for your application using the control panel display and the buttons directly below it. If it becomes necessary to restore the initial printer defaults, see *FEED and PAUSE Self Test* on page 105.

Important • Certain printing conditions may require that you adjust printing parameters, such as print speed, darkness, or print mode. These conditions include (but are not limited to):

- printing at high speeds
- peeling the media
- the use of extremely thin, small, synthetic, or coated labels

Because these and other factors affect print quality, run tests to determine the best combination of printer settings and media for your application. A poor match may limit print quality or print rate, or the printer may not function properly in the desired print mode.

Enter Setup Mode

To enter Setup Mode, complete these steps:

1. Press SETUP/EXIT.
2. Press PLUS (+) or MINUS (–) to scroll through the parameters.
3. Press SELECT to select and deselect the parameters.

Exit Setup Mode

To leave Setup mode, complete these steps:

1. Press SETUP/EXIT.
The LCD displays **SAVE CHANGES**.
2. Press PLUS (+) or MINUS (-) to display the save options:

LCD	Description
PERMANENT	Stores values in the printer even when power is turned off.
TEMPORARY	Saves the changes until power is turned off.
CANCEL	Cancels all changes made since you entered Setup mode, except for changes made to the darkness and tear-off settings, which go into effect as soon as they are made.

LCD	Description
LOAD DEFAULTS	Restores all parameters other than the network settings back to the factory defaults. Use care when loading defaults because you will need to reload all settings that you changed manually.  Note • Loading factory defaults causes the printer to auto-calibrate.
LOAD LAST SAVE	Loads values from the last permanent save.
DEFAULT NET	Restores the wired and wireless network settings back to factory defaults.

3. Press **SETUP/EXIT** to select the displayed choice.

When the configuration and calibration sequence is done, **BBP81** displays.

Change Password-Protected Parameters

Certain parameters, including the communication parameters, are password-protected by factory default.

Caution • Do not change password-protected parameters unless you have a complete understanding of the parameters' functions. If the parameters are set incorrectly, the printer may function unpredictably.

The first time that you attempt to change a password-protected parameter, the printer displays **ENTER PASSWORD**. Before you can change the parameter, you must enter the four-digit numeric password. After you have entered the password correctly, you do not have to enter it again unless you leave Setup mode by pressing SETUP/EXIT or by turning off (O) the printer.

To enter a password for a password-protected parameter, complete these steps:

1. At the password prompt, use MINUS (-) to change the selected digit position.
2. When you have selected the digit that you wish to change, use PLUS (+) to increase the selected digit value. Repeat these two steps for each digit of the password.
3. After entering the password, press SELECT.

The parameter you selected to change is displayed. If the password was entered correctly, you can change the value.

Default Password Value

The default password value is **1234**. The password can be changed using the ZPL command ^KP (Define Password).

Disable the Password Protection Feature

You can disable the password protection feature so that it no longer prompts you for a password by setting the password to **0000** via the ^KP ZPL command. To re-enable the password-protection feature, send the ZPL command ^KPx, where x can be any number from 1 to 9999.

Print a Configuration Label

A configuration label lists the printer settings that are stored in configuration memory. After you load the media, print a configuration label as a record of your printer's current settings. Keep the label to use when troubleshooting printing problems.

To print a configuration label, complete these steps:

1. On the control panel, press SETUP/EXIT.
2. Press \leftarrow or \rightarrow to scroll through the parameters until you reach **LIST SETUP**.
3. Press SELECT to select the parameter.
4. Press PLUS (+) to confirm printing.

A configuration label prints (Figure 11).

Print a Network Configuration Label

If you are using a print server, you can print a network configuration label after the printer is connected to the network.

To print a network configuration label, complete these steps:

1. On the control panel, press SETUP/EXIT.
2. Press PLUS (+) or MINUS (-) to scroll through the parameters until you reach **LIST NETWORK**.
3. Press SELECT to select the parameter.
4. Press PLUS (+) to confirm printing.

A network configuration label prints (Figure 12).

Control Panel Parameters

Use the LCD on the control panel to view and adjust printer settings.

How to View or Modify Parameters

While viewing parameters, press PLUS (+) to continue to the next parameter, or press MINUS (-) to return to the previous parameter in the cycle. Press SELECT when you want to modify a parameter or view its options. When a parameter is changed, an asterisk (*) appears in the upper left corner of the display to indicate that the value is different from the one currently active in the printer.

Note • Your label preparation software or the printer driver may override adjustments made through the control panel. Refer to the software or driver documentation for more information.

Additional Parameters

Additional parameters appear when a wired print server is installed in the printer. For more information, refer to the *BradyConnect 10/100 Print Server User and Reference Guide*.

Standard Printer Parameters

Table 12 shows parameters in the order in which they are displayed when you press PLUS (+) after entering Setup mode.

Table 12 • Printer Parameters (Page 1 of 22)

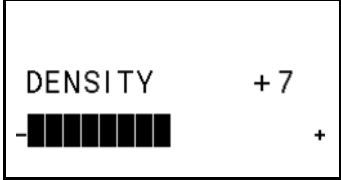

Parameter	Action/Explanation
<p>ZPL and XML</p>  <p>EPL</p> 	<p>Adjust Print Darkness</p> <p>Darkness (burn duration) settings depend on a variety of factors, including ribbon type, media type, and the condition of the printhead. You may adjust the darkness for consistent high-quality printing.</p> <p> Important • Set the darkness to the lowest setting that provides good print quality. If the darkness is set too high, the ink may smear, the ribbon may burn through, or the printhead may wear prematurely.</p> <p>If printing is too light or if there are voids in printed areas, increase the darkness. If printing is too dark or if there is spreading or bleeding of printed areas, decrease the darkness.</p> <p>The FEED Self Test on page 102 can be used to determine the best darkness setting. You may want to adjust darkness while performing the PAUSE Self Test on page 101. Because the darkness setting takes effect immediately, you can see the results on labels that are currently printing. Darkness settings also may be changed by the driver or software settings.</p> <p><i>Default Value (ZPL, XML): +25</i> <i>Range (ZPL, XML): 00 to +30</i> <i>Default Value (EPL): +7</i> <i>Range (EPL): 00 to +15</i></p> <p>To change the value shown:</p> <ol style="list-style-type: none"> 1. Press SELECT to select the parameter. 2. Press PLUS (+) to increase darkness. 3. Press MINUS (-) to decrease darkness. 4. Press SELECT to accept any changes and deselect the parameter.

Table 12 • Printer Parameters (Page 2 of 22)

Parameter	Action/Explanation
<div style="border: 1px solid black; padding: 10px; width: fit-content; margin: 0 auto;"> <p>MEDIA AND RIBBON CALIBRATE+</p> </div>	<p>Calibrate Media and Ribbon Sensor Sensitivity Use this procedure to adjust sensitivity of media and ribbon sensors.</p> <p> Important • Follow this procedure exactly as presented. All of the steps must be performed even if only one of the sensors requires adjustment. You may press MINUS (-) at any step in this procedure to cancel the process.</p> <p>To perform a media and ribbon sensor calibration:</p> <ol style="list-style-type: none"> 1. Press SELECT to select the parameter. 2. Press PLUS (+) to start the calibration procedure. The LOAD BACKING prompt displays. 3. Open the printhead. 4. Remove approximately 8 in. (203 mm) of labels from the backing, and pull the media into the printer so that only the backing is between the media sensors. 5. Leave the printhead open. 6. Press PLUS (+) to continue. The REMOVE RIBBON prompt displays. 7. Remove the ribbon (if used). 8. Close the printhead. 9. Press PLUS (+) to continue. The message CALIBRATING PLEASE WAIT displays. The printer adjusts the scale (gain) of the signals that it receives from the media and ribbon sensors based on the specific media and ribbon combination being used. On the sensor profile, this essentially corresponds to moving the peak of the graph up or down to optimize the readings for your application. When calibration is complete, RELOAD ALL displays. 10. Open the printhead and pull the media forward until a label is positioned under the media sensor. 11. Reload the ribbon (if used). 12. Close the printhead. 13. Press PLUS (+) to continue. The printer performs an auto-calibration. During this process, the printer checks the readings for the media and ribbon based on the new scale established, determines the label length, and determines the print mode. To see the new readings on the new scale, print a sensor profile. 14. Press SELECT to accept any changes and deselect the parameter.

Table 12 • Printer Parameters (Page 3 of 22)

Parameter	Action/Explanation
<div style="border: 1px solid black; padding: 5px; text-align: center;"> MEDIA POWER UP -CALIBRATION + </div>	<p>Select Media Power-Up Option This parameter sets the action of the media when you turn on the printer. <i>Default Value:</i> CALIBRATION <i>Selections:</i> CALIBRATION, SHORT CAL, LENGTH, NO MOTION, FEED</p> <ul style="list-style-type: none"> • Calibration adjusts sensor levels and thresholds, determines length, and feeds the media to the next web. • Short Cal sets media and web thresholds without adjusting sensor gain, determines length, and feeds the media to the next web. • Length determines label length using current sensor values, and feeds the media to the next web. • No Motion tells the printer not to move the media. You must manually ensure that the web is positioned correctly, or press feed to position the next web. • Feed—feeds the labels to the first registration point. <p>To change the value shown:</p> <ol style="list-style-type: none"> 1. Press SELECT to select the parameter. 2. Press PLUS (+) or MINUS (-) to scroll through the options. 3. Press SELECT to accept any changes and deselect the parameter.

Replacing Printer Components	78
Ordering Replacement Parts	78
Recycling Printer Components	78
Lubrication	78
Cleaning Schedule and Procedures	79
Clean the Exterior	79
Clean the Printhead and Platen Roller	80
Clean the Media Compartment and Sensors	83

Replacing Printer Components

Some printer components, such as the printhead and platen roller, may wear out over time and can be replaced easily. Regular cleaning may extend the life of some of these components. See [Cleaning Schedule and Procedures on page 79](#) for the recommended cleaning intervals.

Ordering Replacement Parts

For optimal printing quality and proper printer performance across our product line, Brady recommends the use of genuine Brady supplies as part of the total solution. Specifically, the BBP81 (4") and BBP81 (6") are designed to work only with genuine Brady printheads, thus maximizing safety and print quality.

Contact your authorized Brady reseller for part ordering information, or see [Contacts on page 3](#) for contact addresses and telephone numbers.

Recycling Printer Components

The majority of this printer's components are recyclable. The printer's main logic board includes a battery that you should dispose of properly.

Do not dispose of any printer components in unsorted municipal waste. Please dispose of the battery according to your local regulations, and recycle the other printer components according to your local standards.

Lubrication

No lubrication is needed for this printer.

Caution • Some commercially available lubricants will damage the finish and the mechanical parts if used on this printer.

Cleaning Schedule and Procedures

Important • Brady is not responsible for damage caused by the use of cleaning fluids on this printer.

Specific cleaning procedures are provided on the following pages. [Table 14](#) shows the recommended cleaning schedule. These intervals are intended as guidelines only. You may have to clean more often, depending upon your application and media.

Table 14 • Recommended Cleaning Schedule

Area	Method	Interval
Printhead	Solvent*	Direct Thermal Mode: After every roll of media (or 500 feet of fanfold media). Thermal Transfer Mode: After every roll of ribbon or three rolls of media.
Platen roller	Solvent*	
Media sensors	Air blow	
Ribbon sensor	Air blow	
Media path	Solvent*	
Ribbon path	Solvent*	
Tear-off bar	Solvent*	Once a month.

* Brady recommends using Preventive Maintenance Kit. In place of this kit, you may use a clean cotton swab dipped in a solution of isopropyl alcohol (minimum 90%) and deionized water (maximum 10%).

Clean the Exterior

You may clean the exterior surfaces of the printer with a lint-free cloth and a small amount of a mild detergent, if necessary. Do not use harsh or abrasive cleaning agents or solvents.

Clean the Printhead and Platen Roller

You can minimize printhead wear and maintain print quality with regular preventive measures. Over time, the movement of media or ribbon across the printhead wears through the protective ceramic coating, exposing and eventually damaging the print elements (dots). To avoid abrasion:

- Minimize printhead pressure and burn temperature settings by optimizing the balance between the two.
- Ensure that the thermal transfer ribbon is as wide or wider than the label media to prevent exposing the elements to the more abrasive label material.

For best results, clean the printhead after changing every roll of ribbon. Inconsistent print quality, such as voids in the bar code or graphics, may indicate a dirty printhead.

Caution • While performing any tasks near an open printhead, remove all rings, watches, hanging necklaces, identification badges, or other metallic objects that could touch the printhead. You are not required to turn off the printer power when working near an open printhead, but Brady recommends it as a precaution. If you turn off the power, you will lose all temporary settings, such as label formats, and you must reload them before you resume printing.

Note • For printers with a peel assembly, keep the peel assembly closed while cleaning the platen roller to reduce the risk of bending the tear-off/peel-off bar.

Figure 15 • Location of the Printhead and Platen Roller

1	Printhead assembly
2	Platen roller

Caution • The printhead may be hot and could cause severe burns. Allow the printhead to cool.

Caution • Before touching the printhead assembly, discharge any built-up static electricity by touching the metal printer frame or by using an antistatic wriststrap and mat.

To clean the printhead and platen roller, complete these steps:

1. Open the printhead assembly.
2. Remove the media and ribbon.
3. Using the swab from the Preventive Maintenance Kit, wipe along the brown strip on the printhead assembly from end to end. In place of the Preventive Maintenance Kit, you may use a clean swab dipped in a solution of isopropyl alcohol (minimum 90%) and deionized water (maximum 10%). Allow the solvent to evaporate.

4. While manually rotating the platen roller, clean it thoroughly with the swab. Allow the solvent to evaporate.

5. Reload media and ribbon, and close the printhead assembly.

Note • If performing this procedure does not improve print quality, try cleaning the printhead with Cleaning Film. This specially coated material removes contamination buildup without damaging the printhead. Call your authorized Brady reseller for more information.

Clean the Media Compartment and Sensors

To clean the media compartment and sensors, complete these steps:

1. Brush or vacuum any accumulated paper lint and dust away from the media and ribbon paths.
2. Brush or vacuum any paper lint and dust away from the sensors (see [Figure 16](#)).

Figure 16 • Cleaning the Sensors

1	Take-label sensor - optional

FEED and PAUSE Self Test	105
Communications Diagnostics Test	106
Sensor Profile	107

Troubleshooting Checklists

If an error condition exists with the printer, review this checklist:

- Is there an error message on the LCD? If yes, see *LCD Error Messages* on page 87.
- Are noncontinuous labels being treated as continuous labels? If yes, see *Calibrate Media and Ribbon Sensor Sensitivity* on page 55.
- Is the printer reporting a ribbon error when ribbon is loaded properly? If yes, see *Calibrate Media and Ribbon Sensor Sensitivity* on page 55.
- Are you experiencing problems with print quality? If yes, see *Print Quality Problems* on page 105.
- Are you experiencing communications problems? If yes, see *Communications Problems* on page 95.

If the labels are not printing or advancing correctly, review this checklist:

- Are you using the correct type of labels? Review the types of label in *Types of Media* on page 26.
- Are you using a label that is narrower than the maximum print width? See *Set Print Width* on page 59.
- Review the label- and ribbon-loading illustrations in *Load Media* on page 34 and *Load Ribbon* on page 38.
- Does the printhead need to be adjusted? See *Adjust Printhead Pressure* on page 44 for more information.
- Do the sensors need to be calibrated? See *Calibrate Media and Ribbon Sensor Sensitivity* on page 55 for more information.

If none of the above suggestions correct the problem, review this checklist:

- Perform one or more of the self-tests given in *Printer Diagnostics* on page 99. Use the results to help identify the problem.
- If you are still having problems, see *Contacts* on page 3 for customer support information.

LCD Error Messages

The LCD displays messages when there is an error. See [Table 15](#) for LCD errors, the possible causes, and the recommended solutions.

Table 15 • LCD Error Messages

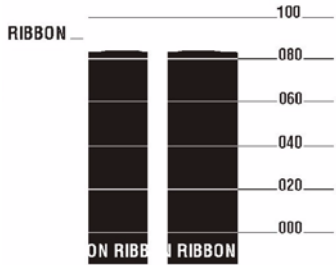

LCD Display/ Printer Condition	Possible Cause	Recommended Solution
<div style="border: 1px solid black; padding: 5px; text-align: center;">ERROR CONDITION INVALID HEAD</div> <p>The ERROR light flashes.</p>	<p>The printhead was replaced with one that is not a genuine Brady printhead.</p>	<p>Install a genuine Brady printhead.</p>
<div style="border: 1px solid black; padding: 5px; text-align: center;">ERROR CONDITION RIBBON OUT</div> <p>The printer stops; the ERROR light flashes.</p>	<p>In thermal transfer mode, ribbon is not loaded or incorrectly loaded.</p> <p>In thermal transfer mode, the ribbon sensor is not detecting ribbon that is loaded incorrectly.</p> <p>In thermal transfer mode, media is blocking the ribbon sensor.</p> <p>In thermal transfer mode, the printer did not detect the ribbon even though it is loaded correctly.</p>	<p>Load ribbon correctly. See Load Ribbon on page 38.</p> <ol style="list-style-type: none"> 1. Load ribbon correctly. See Load Ribbon on page 38. 2. Calibrate the sensors. See Calibrate Media and Ribbon Sensor Sensitivity on page 55. <p>1. Load media correctly. See Load Media on page 34.</p> <ol style="list-style-type: none"> 2. Calibrate the sensors. See Calibrate Media and Ribbon Sensor Sensitivity on page 55. <ol style="list-style-type: none"> 1. Print a sensor profile. See Print Sensor Profile on page 66. The ribbon out threshold (marked by the word RIBBON) is likely too high, above the black area that indicates where the ribbon is detected. <div style="text-align: center;">  <p>The diagram shows a vertical scale from 000 to 100. Two black bars represent the ribbon detection threshold. The word 'RIBBON' is written at the top of the scale. The bars are positioned at approximately 080 and 090 on the scale.</p> </div> <ol style="list-style-type: none"> 2. Calibrate the sensors or load printer defaults. See Calibrate Media and Ribbon Sensor Sensitivity on page 55 or LOAD DEFAULTS on page 49.

Table 15 • LCD Error Messages (Continued)

LCD Display/ Printer Condition	Possible Cause	Recommended Solution
<div style="border: 1px solid black; padding: 5px; text-align: center;">WARNING RIBBON IN</div> <p>The ERROR light flashes.</p>	Ribbon is loaded, but the printer is set for direct thermal mode.	Ribbon is not required with direct thermal media. If you are using direct thermal media, remove the ribbon. This error message will not affect printing.
		If you are using thermal transfer media, which requires ribbon, set the printer for Thermal Transfer mode. See <i>Select Print Method</i> on page 61.
<div style="border: 1px solid black; padding: 5px; text-align: center;">ERROR CONDITION PAPER OUT</div> <p>The printer stops; the ERROR light flashes.</p>	The media is not loaded or is loaded incorrectly.	Load media correctly. See <i>Load Media</i> on page 34.
	Misaligned media sensor.	Check position of the media sensor.
	The printer is set for noncontinuous media, but continuous media is loaded.	Install proper media type, or reset printer for current media type and perform calibration.
<div style="border: 1px solid black; padding: 5px; text-align: center;">ERROR CONDITION HEAD OPEN</div> <p>The printer stops; the ERROR light flashes.</p>	The printhead is not fully closed.	Close printhead completely.
	The head open sensor is not working properly.	Call a service technician.
<div style="border: 1px solid black; padding: 5px; text-align: center;">THERMISTOR FAULT</div> <p>The ERROR light flashes.</p>	The printhead has a faulty thermistor..	Call a service technician.
<div style="border: 1px solid black; padding: 5px; text-align: center;">WARNING HEAD COLD</div>	 <p>Caution • An improperly connected printhead data or power cable can cause these error messages. The printhead may be hot enough to cause severe burns. Allow the printhead to cool.</p>	
<div style="border: 1px solid black; padding: 5px; text-align: center;">THERMISTOR FAULT</div>		<p>Caution • Turn off (O) the printer before performing this procedure. Failure to do so can damage the printhead.</p> <ol style="list-style-type: none"> 1. Turn off (O) the printer. 2. Disconnect and reconnect the data cable to the printhead. 3. Ensure that the cable connector is fully inserted into the printhead connector. 4. Turn on (I) the printer.
<div style="border: 1px solid black; padding: 5px; text-align: center;">ERROR CONDITION HEAD ELEMENT BAD</div> <p>The printer stops; the ERROR light is on; the printer cycles through these three messages.</p>		
		The printhead has a faulty thermistor.

Table 15 • LCD Error Messages (Continued)

LCD Display/ Printer Condition	Possible Cause	Recommended Solution
<div style="border: 1px solid black; padding: 5px; text-align: center;"> WARNING HEAD COLD </div> <p>The printer prints while the ERROR light flashes.</p>	 <p>Caution • An improperly connected printhead data or power cable can cause this error message. The printhead may be hot enough to cause severe burns. Allow the printhead to cool.</p> <p>The printhead temperature is approaching its lower operating limit.</p> <p>The printhead data cable is not properly connected.</p> <p>The printhead has a faulty thermistor.</p>	<p>Continue printing while the printhead reaches the correct operating temperature. If the error remains, the environment may be too cold for proper printing. Relocate the printer to a warmer area.</p> <p>Caution • Turn off (O) the printer before performing this procedure. Failure to do so can damage the printhead.</p> <ol style="list-style-type: none"> 1. Turn off (O) the printer. 2. Disconnect and reconnect the data cable to the printhead. 3. Ensure that the cable connector is fully inserted into the printhead connector. 4. Turn on (I) the printer. <p>Call a service technician.</p>
<div style="border: 1px solid black; padding: 5px; text-align: center;"> WARNING HEAD TOO HOT </div> <p>The printer stops; the ERROR light flashes.</p>	 <p>Caution • The printhead may be hot enough to cause severe burns. Allow the printhead to cool.</p> <p>The printhead is over temperature.</p>	<p>Allow the printer to cool. Printing automatically resumes when the printhead elements cool to an acceptable operating temperature.</p>

Table 15 • LCD Error Messages (Continued)

LCD Display/ Printer Condition	Possible Cause	Recommended Solution
<div style="border: 1px solid black; padding: 5px; text-align: center;">DEFRAGMENTING</div> <p>The printer stops.</p>	<p>The printer is defragmenting memory.</p>	<p>Caution • Do NOT turn off the printer power during defragmenting. Doing so can damage the printer.</p> <p>Allow the printer to finish defragmenting. If you get this error message frequently, check your label formats. Formats that write to and erase memory frequently may cause the printer to defragment often. Using properly coded label formats usually minimizes the need for defragmenting. If this error message does not go away, contact Technical Service. The printer requires service.</p>
<div style="border: 1px solid black; padding: 5px; text-align: center;">OUT OF MEMORY (function)</div>	<p>There is not enough memory to perform the function specified on the second line of the error message.</p>	<p>Free up some of the printer's memory by adjusting the label format or printer parameters. One way to free up memory is to adjust the print width to the actual width of the label instead of leaving the print width set to the default. See <i>Set Print Width</i> on page 59.</p> <hr/> <p>Ensure that the data is not directed to a device that is not installed or is unavailable.</p>

Print Quality Problems

Table 16 identifies problems with print quality, the possible causes, and the recommended solutions.

Table 16 • Print Quality Problems

Problem	Possible Cause	Recommended Solution
General print quality issues	The printer is set at the incorrect print speed.	For optimal print quality, set the print speed to the lowest possible setting for your application via control panel, the driver, or the software. See Adjust Print Speed on page 58 . You may want to perform the FEED Self Test on page 102 .
	You are using an incorrect combination of labels and ribbon for your application.	<ol style="list-style-type: none"> 1. Switch to a different type of media or ribbon to try to find a compatible combination. 2. If necessary, consult your authorized Brady reseller or distributor for information and advice.
	The printer is set at an incorrect darkness level.	For optimal print quality, set the darkness to the lowest possible setting for your application via the control panel, the driver, or the software. See Adjust Print Darkness on page 54 . You may want to perform the FEED Self Test on page 102 to determine the ideal darkness setting.
	The printhead is dirty.	Clean the printhead. See Clean the Printhead and Platen Roller on page 80 .
	Incorrect or uneven printhead pressure.	Set the printhead pressure to the minimum needed for good print quality. See Adjust Printhead Pressure on page 44 .
	The printhead is improperly balanced.	Call a service technician.
Long tracks of missing print on several labels	Print element damaged.	Call a service technician.

Table 16 • Print Quality Problems (Continued)

Problem	Possible Cause	Recommended Solution
Wrinkled ribbon	Ribbon fed through the machine incorrectly.	See Load Ribbon on page 38 .
	Incorrect burn temperature.	Set the darkness to the lowest possible setting for good print quality. See Adjust Print Darkness on page 54 .
	Incorrect or uneven printhead pressure.	Set the printhead pressure to the minimum needed for good print quality. See Adjust Printhead Pressure on page 44 .
	Media not feeding properly; “walking” from side to side.	Make sure that media is snug by adjusting the media guide, or call a service technician.
	The strip plate needs adjusting.	Call a service technician.
	The printhead needs vertical adjustment.	Call a service technician.
	The printhead is improperly balanced.	Call a service technician.
Printing too light or too dark over the entire label	The media or ribbon is not designed for high-speed operation.	Replace supplies with those recommended for high-speed operation.
	You are using an incorrect combination of media and ribbon for your application.	<ol style="list-style-type: none"> Switch to a different type of media or ribbon to try to find a compatible combination. If necessary, consult your authorized Brady reseller or distributor for information and advice.
	You are using ribbon with direct thermal media.	Direct thermal media does not require ribbon. To check if you are using direct thermal media, perform the label scratch test in When to Use Ribbon on page 28 .
	Incorrect or uneven printhead pressure.	Set the pressure to the minimum needed. See Adjust Printhead Pressure on page 44 .
Smudge marks on labels	<ol style="list-style-type: none"> The media or ribbon is not designed for high-speed operation. Media and ribbon are not compatible. 	<ol style="list-style-type: none"> Replace supplies with those recommended for high-speed operation. Confirm media and ribbon compatibility at www.bradyid.com.
Misregistration/skips labels	The printer is not calibrated.	Recalibrate the printer.
	Improper label format.	Use correct label format.
Misregistration and misprint of one to three labels	The platen roller is dirty.	See Clean the Printhead and Platen Roller on page 80 .
	Media does not meet specifications.	Use media that meets specifications.

Table 16 • Print Quality Problems (Continued)

Problem	Possible Cause	Recommended Solution
Vertical drift in top-of-form position	The printer is out of calibration.	Recalibrate the printer.
	Vertical drift occurs during normal printer operation.  Note • A vertical drift of ± 4 to 6 dot rows (approximately 0.5 mm) is within normal tolerances.	Calibrate the printer.
	The platen roller is dirty.	Clean the platen roller. See <i>Clean the Printhead and Platen Roller</i> on page 80.
Vertical image or label drift	The printer is using non-continuous labels but is configured in continuous mode.	Configure the printer for non-continuous and run calibration routine, if necessary.
	The media sensor is positioned incorrectly.	Ensure that the media sensor is properly positioned to read a single/consistent interlabel gap.
	The media sensor is calibrated improperly.	See <i>Calibrate Media and Ribbon Sensor Sensitivity</i> on page 55.
	The platen roller is dirty.	Clean the platen roller. See <i>Clean the Printhead and Platen Roller</i> on page 80.
	Improper printhead pressure settings (toggles).	Adjust the printhead pressure to ensure proper functionality.
	Improperly loaded ribbon or media.	Verify that the printer is loaded properly.
	Incompatible media.	Ensure that the interlabel gaps or notches are 2 to 4 mm and consistently placed. Media must not exceed minimum specifications for mode of operation.
The bar code printed on a label does not scan.	The bar code is not within specifications because the print is too light or too dark.	Perform the <i>FEED Self Test</i> on page 102. Adjust the darkness or print speed settings as necessary.
	Not enough blank space around the bar code.	Leave at least 1/8 in. (3.2 mm) between the bar code and other printed areas on the label and between the bar code and the edge of the label.

Calibration Problems

Table 17 identifies problems with calibration, the possible causes, and the recommended solutions.

Table 17 • Calibration Problems

Problem	Possible Cause	Recommended Solution
Loss of printing registration on labels. Excessive vertical drift in top-of-form registration.	The platen roller is dirty.	Clean the platen roller according to the instructions in <i>Clean the Printhead and Platen Roller on page 80</i> .
	Media guides are positioned improperly.	Ensure that the media guides are properly positioned.
	The media type is set incorrectly.	Set the printer for the correct media type (gap/notch, continuous, or mark). See <i>Set Media Type on page 58</i> .
	The media is loaded incorrectly.	Load media correctly. See <i>Load Media on page 34</i> .
Auto Calibrate failed.	Media or ribbon is loaded incorrectly.	Ensure that media and ribbon are loaded correctly.
	The sensors could not detect the media or ribbon.	Manually calibrate the printer. See <i>Calibrate Media and Ribbon Sensor Sensitivity on page 55</i> .
	The sensors are dirty or positioned improperly. The sensors are dirty, or media is positioned improperly for the sensors to detect.	Ensure that the sensors are clean and that media is positioned properly.

Communications Problems

Table 18 identifies problems with communications, the possible causes, and the recommended solutions.

Table 18 • Communications Problems

Problem	Possible Cause	Recommended Solution
A label format was sent to the printer but was not recognized. The DATA light does not flash.	The communication parameters are incorrect.	Check the printer driver or software communications settings (if applicable).
		If you are using serial communication, check the serial port setting in the control panel menu. See <i>Set Serial Communications on page 67</i> .
		If you are using serial communication, make sure you are using a null modem cable or a null modem adapter.
		Using the control panel controls, check the protocol setting. It should be set to NONE . See <i>Set Protocol on page 69</i> .
		If a driver is used, check the driver communication settings for your connection.
A label format was sent to the printer. Several labels print, then the printer skips, misplaces, misses, or distorts the image on the label.	The serial communication settings are incorrect.	Ensure that the flow control settings match.
		Check the communication cable length. See <i>Table 5 on page 20</i> for requirements.
		Check the printer driver or software communications settings (if applicable).
A label format was sent to the printer but was not recognized. The DATA light flashes but no printing occurs.	The prefix and delimiter characters set in the printer do not match the ones in the label format.	Verify the prefix and delimiter characters. See <i>Set Format Prefix Character on page 70</i> and <i>Set Delimiter Character on page 71</i> for the requirements.
	Incorrect data is being sent to the printer.	Check the communication settings on the computer. Ensure that they match the printer settings.
		If the problem continues, check the label format.

Ribbon Problems

Table 19 identifies problems that may occur with ribbon, the possible causes, and the recommended solutions.

Table 19 • Ribbon Problems

Problem	Possible Cause	Recommended Solution
Broken or melted ribbon	Darkness setting too high.	<ol style="list-style-type: none"> 1. Reduce the darkness setting. 2. Clean the printhead thoroughly.
The printer does not detect when the ribbon runs out. In thermal transfer mode, the printer did not detect the ribbon even though it is loaded correctly.	The printer was calibrated without ribbon. Later, ribbon was inserted without the user recalibrating the printer or loading printer defaults.	Calibrate the printer, this time using ribbon, or load printer defaults. See <i>Calibrate Media and Ribbon Sensor Sensitivity</i> on page 55.
The ribbon light is on even though ribbon is loaded correctly.	The printer was not calibrated for the label and ribbon being used.	Perform the calibration procedure in <i>Calibrate Media and Ribbon Sensor Sensitivity</i> on page 55.

Miscellaneous Printer Problems

Table 20 identifies miscellaneous problems with the printer, the possible causes, and the recommended solutions.

Table 20 • Miscellaneous Printer Problems

Problem	Possible Cause	Recommended Solution
The LCD displays a language that I cannot read	The language parameter was changed through the control panel or a firmware command.	<ol style="list-style-type: none"> 1. Press SETUP/EXIT to enter configuration mode. 2. Press MINUS (-). The printer displays the LANGUAGE parameter in the current language. Even if you cannot recognize the characters displayed, you can still scroll to another language. 3. Press SELECT to select the parameter. 4. Press PLUS (+) or MINUS (-) to scroll through the choices until you find a language that you can read. 5. Press SETUP/EXIT. The LCD displays SAVE CHANGES in the original language. 6. Press SETUP/EXIT again to exit configuration mode and save the changes (if the language does not change, you may need to scroll to a different save option by pressing PLUS (+) or MINUS (-) in the previous step). 7. Repeat this process, if necessary, until you reach the desired language.
The LCD is missing characters or parts of characters	The LCD may need replacing.	Call a service technician.
Changes in parameter settings did not take effect	Parameters are set incorrectly.	<ol style="list-style-type: none"> 1. Set parameters and save permanently. 2. Turn the printer off (●) and then on (I).
Changes in parameter settings did not take effect	A ZPL command turned off the ability to change the parameter.	Refer to the <i>ZPL Programming Guide</i> , or call a service technician.
Changes in parameter settings did not take effect	A ZPL command changed the parameter back to the previous setting.	Refer to the <i>ZPL Programming Guide</i> , or call a service technician.
Changes in parameter settings did not take effect	If the problem continues, there may be a problem with the main logic board.	Call a service technician.

Table 20 • Miscellaneous Printer Problems (Continued)

Problem	Possible Cause	Recommended Solution
The printer fails to calibrate or detect the top of the label.	The printer was not calibrated for the label being used.	Perform the calibration procedure in <i>Calibrate Media and Ribbon Sensor Sensitivity</i> on page 55.
	The printer is configured for continuous media.	Set the media type to noncontinuous media. See <i>Set Media Type</i> on page 58.
	The driver or software configuration is not set correctly.	Driver or software settings produce commands that can overwrite the printer configuration. Check the driver or software media-related setting.
Non-continuous labels are being treated as continuous labels.	The printer was not calibrated for the media being used.	Perform the calibration procedure in <i>Calibrate Media and Ribbon Sensor Sensitivity</i> on page 55.
	The printer is configured for continuous media.	Set the media type to noncontinuous media. See <i>Set Media Type</i> on page 58.
All lights are on, but nothing displays on the LCD, and the printer locks up.	Internal electronic or firmware failure.	Call a service technician.
The printer locks up while running the Power-On Self Test.	Main logic board failure.	Call a service technician.

Printer Diagnostics

Self tests and other diagnostics provide specific information about the condition of the printer. The self tests produce sample printouts and provide specific information that helps determine the operating conditions for the printer. The most commonly used are the Power-On and the CANCEL self tests.

Important • Use full-width media when performing self tests. If your media is not wide enough, the test labels may print on the platen roller. To prevent this from happening, check the print width using [Set Print Width on page 59](#), and ensure that the width is correct for the media that you are using.

Each self test is enabled by pressing a specific control panel key or combination of keys while turning on (I) the printer power. Keep the key(s) pressed until the first indicator light turns off. The selected self test automatically starts at the end of the Power-On Self Test.

Note •

- When performing these self tests, do not send data to the printer from the host.
- If your media is shorter than the label to be printed, the test label continues on the next label.
- When canceling a self test prior to its actual completion, always reset the printer by turning it off (O) and then on (I).

Power-On Self Test

A Power-On Self Test (POST) is performed each time the printer is turned on (I). During this test, the control panel lights (LEDs) turn on and off to ensure proper operation. At the end of this self test, only the POWER LED remains lit. When the Power-On Self Test is complete, the media is advanced to the proper position.

To initiate the Power-On Self Test, complete these steps:

1. Turn on (I) the printer.

The POWER LED illuminates. The other control panel LEDs and the LCD monitor the progress and indicate the results of the individual tests. All messages during the POST display in English; however, if the test fails, the resulting messages cycle through the international languages as well.

CANCEL Self Test

The CANCEL self test prints a configuration label (Figure 17).

To perform the CANCEL Self Test, complete these steps:

1. Turn off (O) the printer.
2. Press and hold CANCEL while turning on (I) the printer. Hold CANCEL until the first control panel light turns off.
A printer configuration label prints (Figure 17).

PAUSE Self Test

This self test can be used to provide the test labels required when making adjustments to the printer's mechanical assemblies or to determine if any printhead elements are not working. [Figure 18](#) shows a sample printout.

To perform a PAUSE self test, complete these steps:

1. Turn off (O) the printer.
2. Press and hold PAUSE while turning on (I) the printer. Hold PAUSE until the first control panel light turns off.
 - The initial self test prints 15 labels at the printer's slowest speed, and then automatically pauses the printer. Each time PAUSE is pressed, an additional 15 labels print. [Figure 18](#) shows a sample of the labels.

Figure 18 • PAUSE Test Label

- While the printer is paused, pressing CANCEL alters the self test. Each time PAUSE is pressed, 15 labels print at 6 in. (152 mm) per second.
- While the printer is paused, pressing CANCEL again alters the self test a second time. Each time PAUSE is pressed, 50 labels print at the printer's slowest speed
- While the printer is paused, pressing CANCEL again alters the self test a third time. Each time PAUSE is pressed, 50 labels print at 6 in. (152 mm) per second.
- While the printer is paused, pressing CANCEL again alters the self test a fourth time. Each time PAUSE is pressed, 15 labels print at the printer's maximum speed.
- To exit this self test at any time, press and hold CANCEL.

FEED Self Test

Different types of media may require different darkness settings. This section contains a simple but effective method for determining the ideal darkness for printing bar codes that are within specifications.

During the FEED self test, labels are printed at different darkness settings at two different print speeds. The relative darkness and the print speed are printed on each label. The bar codes on these labels may be ANSI-graded to check print quality.

The darkness value starts at three settings lower than the printer's current darkness value (relative darkness of -3) and increase until the darkness is three settings higher than the current darkness value (relative darkness of +3).

Depending on the dot density of the printhead, seven labels are printed at each of the following speeds:

- 203 dpi printers: 2 ips, 6 ips, and 10 ips
- 300 dpi printers: 2 ips, 6 ips, 8 ips
- 600 dpi printers: 2 ips, 4 ips

To perform a FEED self test, complete these steps:

1. Print a configuration label to show the printer's current settings.
2. Turn off (O) the printer.
3. Press and hold FEED while turning on (I) the printer. Hold FEED until the first control panel light turns off.

The printer prints a series of labels (Figure 19) at various speeds and at darkness settings higher and lower than the darkness value shown on the configuration label.

Figure 19 • FEED Test Label

- See [Figure 20](#) and [Table 21](#). Inspect the test labels and determine which one has the best print quality for your application. If you have a bar code verifier, use it to measure bars/spaces and calculate the print contrast. If you do not have a bar code verifier, use your eyes or the system scanner to choose the optimal darkness setting based on the labels printed in this self test.

Figure 20 • Bar Code Darkness Comparison

Table 21 • Judging Bar Code Quality

Print Quality	Description
Too dark	<p>Labels that are too dark are fairly obvious. They may be readable but not “in-spec.”</p> <ul style="list-style-type: none"> • The normal bar code bars increase in size. • The openings in small alphanumeric characters may fill in with ink. • Rotated bar code bars and spaces run together.
Slightly dark	<p>Slightly dark labels are not as obvious.</p> <ul style="list-style-type: none"> • The normal bar code will be “in-spec.” • Small character alpha numerics will be bold and could be slightly filled in. • The rotated bar code spaces are small when compared to the “in-spec” code, possibly making the code unreadable.
“In-spec”	<p>The “in-spec” bar code can only be confirmed by a verifier, but it should exhibit some visible characteristics.</p> <ul style="list-style-type: none"> • The normal bar code will have complete, even bars and clear, distinct spaces. • The rotated bar code will have complete, even bars and clear, distinct spaces. Although it may not look as good as a slightly dark bar code, the bar code will be “in-spec.” • In both normal and rotated styles, small alphanumeric characters look complete.
Slightly light	<p>Slightly light labels are, in some cases, preferred to slightly dark ones for “in-spec” bar codes.</p> <ul style="list-style-type: none"> • Both normal and rotated bar codes will be in spec, but small alphanumeric characters may not be complete.
Too light	<p>Labels that are too light are obvious.</p> <ul style="list-style-type: none"> • Both normal and rotated bar codes have incomplete bars and spaces. • Small alphanumeric characters are unreadable.

5. Note the relative darkness value and the print speed printed on the best test label.
6. Add or subtract the relative darkness value from the darkness value specified on the configuration label. The resulting numeric value is the best darkness value for that specific label/ribbon combination and print speed.
7. If necessary, change the darkness value to the darkness value on the best test label. See [Adjust Print Darkness on page 54](#).
8. If necessary, change the print speed to the same speed as on the best test label. See [Adjust Print Speed on page 58](#).

FEED and PAUSE Self Test

Performing this self test temporarily resets the printer configuration to the factory default values. These values are active only until power is turned off unless you save them permanently in memory. If the factory default values are permanently saved, a media calibration procedure must be performed.

To perform a FEED and PAUSE self test, complete these steps:

1. Turn off (O) the printer.
2. Press and hold FEED and PAUSE while turning on (I) the printer.
3. Hold FEED and PAUSE until the first control panel light turns off.

The printer configuration is temporarily reset to the factory default values. No labels print at the end of this test.

Communications Diagnostics Test

The communication diagnostics test is a troubleshooting tool for checking the interconnection between the printer and the host computer.

When the printer is in diagnostics mode, it prints all data received from the host computer as straight ASCII characters with the hex values below the ASCII text. The printer prints all characters received, including control codes such as CR (carriage return). [Figure 21](#) shows a typical test label from this test.

Note • The test label prints upside-down.

Figure 21 • Communications Diagnostics Test Label

To use communications diagnostics mode, complete these steps:

1. Set the print width equal to or less than the label width being used for the test. See [Set Print Width on page 59](#) for more information.
2. Set the printer to **DIAGNOSTICS**. For instructions, see [Set Communications Mode on page 69](#).

The printer enters diagnostics mode and prints any data received from the host computer on a test label

3. Check the test label for error codes. For any errors, check that your communication parameters are correct.

Errors show on the test label as follows:

- FE indicates a framing error.
- OE indicates an overrun error.
- PE indicates a parity error.
- NE indicates noise.

4. Turn the printer off (**O**) and then back on (**I**) to exit this self test and return to normal operation.

Sensor Profile

Use the sensor profile label to troubleshoot the following types of problems:

- If the media sensor experiences difficulty in determining gaps (web) between labels.
- If the media sensor incorrectly identifies preprinted areas on a label as gaps (web).
- If the ribbon sensor cannot detect ribbon.

For instructions on printing a sensor profile, see [Print Sensor Profile on page 66](#). If the sensitivity of the sensors must be adjusted, perform [Calibrate Media and Ribbon Sensor Sensitivity on page 55](#).

Ribbon Sensor Profile (Figure 22) The bars (1) on the sensor profile indicate the ribbon sensor readings. The ribbon sensor threshold setting is indicated by the word RIBBON (2). If the ribbon readings are below the threshold value, the printer does not acknowledge that ribbon is loaded.

Figure 22 • Sensor Profile (Ribbon Section)

Media Sensor Profile (Figure 23) The media sensor readings are shown as bars and flat areas on the sensor profile. The bars (1) indicate gaps between labels (the web), and the low areas (2) indicate where labels are located. If you compare the sensor profile printout to a blank length of your media, the bars should be the same distance apart as the gaps on the media. If the distances are not the same, the printer may be having difficulty determining where the gaps are located.

The media sensor threshold settings are shown by the words MEDIA (3) for the media threshold and WEB (4) for the web threshold. Use the numbers to the left of the sensor readings to compare the numeric readings to the sensor settings.

Figure 23 • Sensor Profile (Media Section)

Total thickness (includes liner, if any)		Minimum	0.0023 in.	0.058 mm	0.0023 in.	0.058 mm
		Maximum	0.01 in.	0.25 mm	0.010 in.	0.25 mm
Core size			3 in.	76 mm	3 in.	76 mm
Maximum roll diameter			8 in.	203 mm	8 in.	203 mm
Maximum fanfold pack size (length x width x height)			8.0 in. × 4.5 in. × 6.2 in.	203 mm × 114 mm × 157 mm	8.0 in. × 7.0 in. × 6.2 in.	203 mm × 178 mm × 157 mm
Inter-label gap		Minimum	0.079 in.	2 mm	0.079 in.	2 mm
		Preferred	0.118 in.	3 mm	0.118 in.	3 mm
		Maximum	0.157 in.	4 mm	0.157 in.	4 mm
Ticket/tag notch size (width x length)			0.25 in. × 0.12 in.	6 mm × 3 mm	0.25 in. × 0.12 in.	6 mm × 3 mm
Hole diameter			0.125 in.	3 mm	0.125 in.	3 mm
Notch or hole position (Centered from inner media edge)		Minimum	0.15 in.	3.8 mm	0.15 in.	3.8
		Maximum	2.25 in.	57 mm	3.5 in.	90 mm
Black mark dimensions	Vertical length		0.98 in. to 0.453 in.	2.5 to 11.5 mm	0.98 in. to 0.453 in.	2.5 to 11.5 mm
	Horizontal width		> 0.37 in.	≥ 9.5 mm	≥ 0.37 in.	≥ 9.5 mm
	Location		Within 0.40 in. (1 mm) of inside media edge			
Density, in Optical Density Units (ODU)			> 1.0 ODU			
Maximum media density			0.5 ODU			

Ribbon Specifications

Ribbon is wound with the coated side on the outside. The ribbon used must match the Thermal Transfer option installed. The standard Thermal Transfer option (black ribbon spindle) uses ribbon coated on the outside. For more information, see [Ribbon Overview on page 28](#).

Ribbon Specifications		BBP81 (4")		BBP81 (6")	
Ribbon width (Brady recommends using ribbon at least as wide as the media to protect the printhead from wear.)	Minimum	>2 in.*	51 mm*	>2 in.	51 mm
	Maximum	4.3 in.	110 mm	6.85 in.	174 mm
Standard lengths	2:1 media to ribbon roll ratio	984 ft.	300 m	984 ft.	300 m
	3:1 media to ribbon roll ratio	1476 ft.	450 m	1476 ft.	450 m
Ribbon core inside diameter		1 in.	25.4 mm	1 in.	25.4 mm
Maximum ribbon roll size		3.2 in.	81.3 mm	3.2 in.	81.3 mm

* The narrowest width tested and approved for this printer is 2 in. (51 mm). You may be able to use narrower ribbon, as long as the ribbon is wider than the media being used. To use a ribbon narrower than 2 in. (51 mm), test the ribbon's performance with your media to assure that you get the desired results.

Printer Options

Printer options that are currently available include the BBP81 Thermal Transfer 300 dpi, 4-inch wide printer. This printer is available with Internal or External (field-installable) Ethernet 10/100 Print Server. Please check with your Brady representative to learn more about Brady printers.
